

UiPath Inc. is a global software company that makes robotic process automation (RPA) software. It was founded in Bucharest, Romania, by Daniel Dines and Marius Tîrcă. Its headquarters are in New York City. The company's software monitors user activity to automate repetitive front and back office tasks, including those performed using other business software such as customer relationship management or enterprise resource planning (ERP) software. UiPath develops software to automate repetitive digital tasks normally performed by people. The technology combines emulating how humans read computer screens (AI computer vision), together with APIs, and gives users access to pre-built automation on components that can be combined to automate routine processes.[11] Its earlier products simplified tasks performed using other business software such as CRM or ERP systems, in internal and back-office areas like accounting, human resources paperwork, and claims processing.[23][24] Newer applications of the company's software include coordinating with artificial intelligence systems to simplify repetitive front office tasks including customer management.[24] UiPath's built-in optical character recognition (OCR) engines from Google, Microsoft, and ABBYY can read information from a screen or scanned document
